

Value Proposition: Low-cost, AI-powered object detection software converting standard commercial trail cameras into a real-time remote border surveillance network at a fraction of the cost of legacy military hardware.

EXECUTION TIMELINE

PHASE 1: MVP

MONTHS 1–3

- **Product Validation & Single-Site Deployment**
 - Deploy a single solar-powered commercial camera on a high-traffic private border ranch.
 - Optimize localized AI model to accurately detect human forms vs. wildlife.
 - Establish instant SMS/Cloud alerting protocol for immediate landowner verification.

PHASE 2: ALPHA

MONTHS 4–6

- **Private Beta Expansion & Lean Canvas Refinement**
 - Scale pilot to 5 private ranches to collect diverse terrain and environmental data.
 - Refine GTM messaging targeting budget-constrained regional procurement officers.
 - Lock in hardware specifications to ensure unit economics stay strictly at-cost.

PHASE 3: BETA

MONTHS 7–9

- **Government Trials & Funnel Automation**
 - Launch paid pilots with 2 local county/regional border enforcement agencies.
 - Integrate secure CRM and telemetry data pipeline to track remote camera health automatically.
 - Minimize feature creep; prioritize system uptime and alert latency over secondary analytics.

PHASE 4: SCALE

MONTHS 10–12

- **Commercialization & SaaS Growth**
 - Transition successful pilots into recurring B2B SaaS monitoring subscriptions.
 - Form deliberate partnerships with specialized commercial camera manufacturers for distribution.
 - Aggressively optimize Customer Acquisition Cost (CAC) vs. Lifetime Value (LTV).

CORE STEERING METRICS

NORTH STAR METRIC

Verified Detections

Weekly count of actionable alerts verified as accurate by end-users. Proves true operational value.

PRIMARY PRICING MODEL

B2B SaaS Tier

Hardware sold purely at cost; recurring monthly subscription fee charged per active camera feed.
